Environmental Sustainability Report 2022

UNSW Estate Management
June 2023
Acknowledgement of Country

UNSW Sydney acknowledges the Bedegal people (Kensington Campus), Gadigal people (Sydney CBD and Art & Design campuses) and Ngunnawal people (UNSW Canberra – ADFA) as the traditional custodians of the lands on which each UNSW campus is located. For tens of thousands of years, Aboriginal and Torres Strait Islander people managed the land sustainably using practices adapted to its unique climate, geography and ecology. We honour their relationships with the land and their rich contribution to society.

I am pleased to introduce the Environmental Sustainability Report 2022, the first progress report of the Environmental Sustainability Plan 2022-24, which deepens UNSW's commitment to environmental sustainability and builds on our significant achievements to date.

UNSW has a strong heritage of expertise in climate science and sustainability. As a public service university, we have a responsibility to use our rich source of knowledge and capability to deliver solutions to the climate crisis and secure a more liveable world.

Our planet is at a critical point. The UN Intergovernmental Panel on Climate Change (IPCC) AR6 Synthesis Report: Climate Change 2023 states climate change is a threat to human wellbeing and planetary health. It reiterates the urgent need for the world to cut emissions and adapt to the new climate realities. Momentum is building for change: at the UN Biodiversity Conference (COP15), held in Montreal at the end of 2022, a historic deal was struck to halt biodiversity loss by 2030 including the protection of 30 per cent of the planet’s land and seas.

UNSW’s Environmental Sustainability Plan 2022-24 guides the University’s strategic planning and contribution to the United Nations Sustainable Development Goals (SDGs). The Plan identifies three themes: Climate action, Living campuses and Resource efficiency. New goals include achieving a net gain in biodiversity value at Kensington campus – at least 80% of campus retailers achieving Plastic-Free Dining gold status, as well as increasing targets for energy and water efficiency, waste reduction and onsite solar photovoltaic (PV) capacity.

This report highlights our actions and progress against the first year of the Plan.

Having switched to 100 per cent renewable electricity in 2020, our focus is now on electrifying campus infrastructure and tackling ‘scope 3’ emissions: those from our suppliers, travel and investment activities. In 2022, the University developed an Electrification Strategy, which will guide the phasing out of gas and other fossil fuels and electrifying our campuses to meet the University’s energy needs.

Our progress towards net zero emissions was recognised at the Bankesia Foundation 2022 NSW Sustainability Awards, with UNSW winning the ‘Net Zero Action’ category. With the installation of the Paddington campus’ first solar PV system, UNSW now has a total of 1.37MW installed solar PV capacity, placing us on track to achieving our target of 1.5MW by 2025.

In 2022, we expanded the Laboratory Efficiency Assessment Framework, an initiative that drives sustainable practices in laboratories, following a successful pilot in 2021. Twenty-two laboratory groups have joined the program, achieving significant decreases in single-use plastics and carbon emissions.

We took further steps to improve waste management with new food and compostable packaging bins introduced in staff kitchen areas across the Kensington campus in 2022. This builds on our existing programs, including Plastic Free Dining, which aim to eliminate single-use plastics and divert waste from landfill.

In 2022, UNSW made the Nature Positive Pledge – a commitment to determine a baseline of our impact on nature and set specific, measurable targets for biodiversity. Supporting this commitment, UNSW is restoring the Fowlers Gap Arid Zone Research Station in outback New South Wales into a dedicated site for conservation after more than 150 years of agricultural land use.

These impressive achievements reflect our ambition to be a catalyst for an environmentally sustainable future through collaborative research, partnership and innovation. UNSW made great progress towards our environmental sustainability goals in 2022, and the Environmental Sustainability Plan 2022-24 will continue to drive our efforts.

I am proud to lead a university with such a strong sense of responsibility and commitment to environmental sustainability. Thank you to everyone in the UNSW community who is advancing these initiatives to build a more sustainable world, and ultimately improve the lives of people in Australia and around the world.

Living campuses
- Won a Banksia 2022 NSW Sustainability Award in the ‘Net Zero Action’ category.
- Completed the Electrification Strategy and Paddington solar PV project to continue our transition towards clean renewable electricity.
- Implemented low-emissions and fossil-free investment strategies.

Climate action
- UNSW ranked joint fifth in the world and joint first in Australia in the inaugural QS World University Sustainability Rankings for its contribution to tackling global environmental, social and governance challenges.
- UNSW jumped 41 places to 55th in the world out of 1,406 institutions in the Times Higher Education Impact Rankings, which measure research, outreach and stewardship against the SDGs.

Living campuses
- Expanded the Laboratory Efficiency Framework (LEAF) program, with 22 laboratory teams participating and 18 now accredited University-wide.
- Began restoration of Fowlers Gap Arid Zone Research Station into a dedicated site for conservation and research.
- Village Green project was completed, incorporating sustainable design features.

Resource efficiency
- Introduced the Plastic Free Dining Awards to recognise campus retailers.
- Expanded food waste collection to office kitchens and introduced a soft plastics collection system.
- Furniture reuse program diverted 84% of surplus UNSW furniture from landfill to beneficial reuse.
UNSW Sydney is an education and research-intensive university, which delivers outstanding teaching alongside cutting-edge research. Established in 1949 and with campuses in Sydney and Canberra, UNSW is principally focused on the scientific, technological and professional disciplines. Environmental sustainability is a key element of our updated 2025 Strategy.

Many of our students and staff are actively engaged in environmental and social issues. We recognise that we are uniquely positioned to contribute to solving global environmental challenges through teaching, research, thought leadership and demonstrating leading practices on our campuses.

UNSW's environmental sustainability program is led and coordinated by the Sustainability unit within Estate Management, in collaboration with students and staff across academic faculties and divisions.

Our Environmental Sustainability Plan 2022-24 supports the 2025 Strategy, in particular:

Theme 03 – Sustainable Development:
Objective 2 – Reduce our environmental footprint by using natural resources more efficiently, reducing waste and ensuring investments are consistent with the UN SDGs.
Enable 04 – Enhance our Campuses:
Objective 2 – Position our campuses and the activities they support as leaders in sustainability practices. We can do this by minimising our environmental footprint and improving resource efficiency.

UNSW and the global goals

The 2030 Agenda for Sustainable Development, adopted by all UN Member States in 2015, provides a shared blueprint for peace and prosperity for people and the planet, now and into the future. At its heart are the 17 SDGs, which aim to tackle the world’s most pressing challenges by 2030 – including ending poverty, delivering more equitable prosperity and protecting the planet.

Universities have a critical role to play in the achievement of the SDGs. The Environmental Sustainability Plan supports UNSW’s contribution to the following seven SDGs and their associated targets.

Living campuses

- Theme 03 – Sustainable Development:
  Objective 2 – Position our campuses and the activities they support as leaders in sustainability practices. We can do this by minimising our environmental footprint and improving resource efficiency.

Resource efficiency

- Theme 03 – Sustainable Development:
  Objective 2 – Position our campuses and the activities they support as leaders in sustainability practices. We can do this by minimising our environmental footprint and improving resource efficiency.
The Environmental Sustainability Plan 2022-24 at a glance

UNSW’s Environmental Sustainability Policy is the foundation of our Environmental Sustainability Plan. The three themes that support this foundation – Climate action, Living campuses and Resource efficiency – guide our strategic planning and contribution to the Sustainable Development Goals (SDGs). To deliver on these ambitious themes, we have identified seven focus areas, which are supported by targets and key initiatives.

Climate action
Take urgent action to achieve net zero emissions across our operations and value chain.

Living campuses
Create healthy, resilient places for learning and research where people and nature thrive.

Resource efficiency
Conserve resources by reducing consumption, prioritising reuse and responsibly managing waste.

Focus area | Targets1 | Key initiatives
---|---|---
Operational emissions | Maintain net zero operational (scope 1 and 2) emissions | Implement Stage 1 of the Electrification Strategy
| Increase onsite solar PV capacity to 1.5MWp | Procure 100% renewable electricity
Partnersing for net zero | Reduce total (scope 1, 2 and 3) emissions by 30% by 2023, 50% by 2030 and to net zero by 20502 | Complete a climate risk assessment
| Divest investments in fossil fuel companies3 | Complete and implement the Net Zero Strategy
Buildings and campuses | Capital projects achieve our minimum sustainability requirements | Maintain the Responsible Investment Framework
| Kensington campus achieves a net gain in biodiversity value | Maintain the Sustainable Procurement Framework
Engagement and integration | Increase student and staff awareness of environmental sustainability issues |
Travel and transport | At least 85% of students and staff travel to campus by sustainable travel modes | Develop and implement an active travel masterplan
Energy and water | Reduce energy intensity by 5% | Maintain and implement the Energy and Water Action Plan
| Reduce water intensity by 5% | |
Waste and recycling | Divert at least 85% of general waste4 from landfill | Maintain and implement the Waste Management Plan
| Reduce general waste by 20% | Maintain and implement Plastic Free Dining
| At least 80% of retailers achieve Plastic Free Dining gold award status | 1 Target year is 2025 (i.e., will be measured based on full year 2024 performance) unless stated otherwise. Target scope and baseline details are shown in Appendix 1.
2 Emission reduction target will be periodically reviewed, and updates recommended so that it continues to align with best practice and reflects maximum effort towards limiting temperature increase to 1.5°C.
3 Includes direct ownership and commingled funds that include public equities and corporate bonds of companies who derive over 20% of their revenue from ownership and exploitation of fossil fuel reserves.
4 General waste includes waste from internal areas (burgundy, red, yellow and blue bins) and external areas (burgundy, white and red bins).
How we measure progress

Our Environmental Sustainability Plan 2022–24 addresses our key operational activities and environmental issues. Our approach in each area is structured as follows:

> Targets: Specific, measurable outcomes that we measure our progress against.
> Key initiatives: The main strategies that enable the realisation of our targets.

The Environmental Sustainability Plan 2022–24 contains 13 targets. Progress towards our targets is reported in its respective sections using the following categorisation:

<table>
<thead>
<tr>
<th>Status</th>
<th>Symbol</th>
<th>Description</th>
<th>Count</th>
</tr>
</thead>
<tbody>
<tr>
<td>On track</td>
<td>⬤</td>
<td>Targeted outcome is on track for achievement by the end of the reporting period</td>
<td>9</td>
</tr>
<tr>
<td>Not on track</td>
<td>△</td>
<td>Targeted outcome is not on track for achievement by the end of the reporting period</td>
<td>3</td>
</tr>
<tr>
<td>No data</td>
<td></td>
<td>Data enabling progress to be measured is not available</td>
<td>1</td>
</tr>
</tbody>
</table>

Our performance is reported in the sections that follow, and progress towards all targets is summarised on page 20.
Climate action

Taking urgent action to achieve net zero emissions across our operations and value chain.
Climate action

Goal: Take urgent action to achieve net zero emissions across our operations and value chain.

Why this matters
Climate change is an existential threat and tackling it is a top priority for our students, staff and communities, as well as a key UNSW research and teaching focus. Our Climate action theme includes measures to reduce operational (scope 1 and 2) emissions such as switching to renewable energy and electrifying our campuses, as well as tackling value chain (scope 3) emissions by engaging with our key suppliers and divesting from fossil fuel investment holdings.

How we are responding
Our approach is underpinned by a comprehensive annual inventory of our greenhouse gas (GHG) emissions undertaken since 2018, and our target to reduce total (scope 1, 2 and 3) emissions in line with efforts to limit temperature increase to 1.5°C, the goal of the Paris Agreement. We will continue to monitor our performance and review our target to ensure it reflects best practice and maximum effort towards – or beyond a fair share of – the necessary 50 per cent global emission reduction by 2030 identified in the IPCC Special Report on Global Warming of 1.5°C.

Value chain emissions result from activities such as construction, procurement, travel and investment activities, some of which organisations can influence but not directly control. Tracking and reducing these emissions is highly complex. We are actively engaging with UNSW suppliers and other stakeholders to reduce value chain emissions.

Energy sourcing and onsite solar energy projects are managed by Estate Management, while measuring and reducing our total GHG footprint involves staff in facilities management, construction, procurement, merchandising, travel and investment services, as well as suppliers and academic experts.

</table>

Highlights
- Won a Banksia 2022 NSW Sustainability Award in the ‘Net Zero Action’ category.
- Completed the Electrification Strategy and Paddington solar PV project to continue our transition towards clean renewable electricity.
- Implemented low emissions and fossil-free investment strategies.

Sustainable Development Goal(s)
- And are especially focused on these targets under SDGs 7 and 13:
  - 7.2 By 2030, increase substantially the share of renewable energy in the global energy mix.
  - 13.3 Improve education, awareness-raising and human and institutional capacity on climate change mitigation, adaptation, impact reduction and early warning.

Our activities in this area contribute to the following SDGs: 7 and 13.

Goal: Take urgent action to achieve net zero emissions across our operations and value chain.
Climate action continued

2022 progress

Progress was made towards UNSW's Climate action targets in 2022. Our efforts in this area saw UNSW Sydney recognised with a prestigious Banksia 2022 NSW Sustainability Award in the Net Zero Action category (see case study).

An Electrification Strategy was completed, setting out a phased pathway to tackle direct GHG emissions from fuels and refrigerant gases (see case study). Supporting the Electrification Strategy, a new 131kW solar PV system at Paddington campus was completed in early 2023.

Low emissions and fossil-free strategies continued to be implemented for UNSW investment holdings (see case study).

Finally, further progress was made to reduce our total emissions in line with our 1.5°C-aligned target of a 30 per cent reduction by 2025 and 50 per cent reduction by 2030 (see case study). Improvements were also made to our methodology for measuring emissions, particularly from investment holdings.

UNSW Sydney wins prestigious sustainability award

UNSW was presented with a Banksia NSW Sustainability Award by NSW Treasurer and Energy Minister Matt Kean at a ceremony in October 2022.

The award, in the ‘Net Zero Action’ category, recognised UNSW’s efforts to achieve net zero emissions through energy efficiency and onsite solar PV initiatives, switching to 100% renewable electricity through a landmark Power Purchase Agreement (PPA), and measuring and targeting value chain emissions from sources such as purchased goods and services, investments and travel.

“This award reflects many years of work since UNSW Estate Management began installing onsite solar PV systems and working on a solar Power Purchase Agreement,” said Head of Environmental Sustainability William Syddall.

“Having switched to 100 per cent renewable electricity in 2020, our focus is now on electrifying campus infrastructure and tackling emissions from our supply chain, investments and travel. Most of these emissions are outside of our direct control and can only be reduced through engagement and partnership.”

Electrification Strategy completed

Clean electrification – the process of replacing assets that use fossil fuels such as natural gas with assets that use renewable electricity – is a key component of UNSW’s pathway to net zero emissions. UNSW campuses use fossil fuels for building heating, hot water, steam, vehicles and back-up electricity generation. Having studied the potential to electrify our campuses in 2021, Estate Management developed an Electrification Strategy which was approved in 2022 with funding allocated for the delivery of Stage 1 (2022-25).

The Strategy is summarised below:

1. Electrify our campuses
   - Electrify existing buildings and infrastructure based on life cycle and economic efficiency
   - New buildings and infrastructure to be all-electric
   - Install EV charging infrastructure
   - Set low-global warming potential (GWP) standard for all new equipment
   - Replace, retrofit and refurbish equipment that uses high-GWP refrigerants
   - Engage equipment manufacturers and drive change
   - Use low emissions fuels for assets that cannot be electrified

2. Transition to low-GWP refrigerants and fuels
   - Study battery storage solutions for campuses and critical infrastructure
   - Maxmise onsite solar PV capacity
   - Increase resilience to power outage events
   - Reduce peak pricing exposure in the electricity market

Further analysis is being undertaken to identify priority projects and engineering designs will be completed in 2023.

New solar PV system installed

Supporting the Electrification Strategy, a new 131kW solar PV system was installed at the Paddington campus in 2022-23, pictured below right. The new system is on the rooftops of Blocks D, F and G and is the first PV system at the campus. There are now 14 PV systems at UNSW’s main Sydney campuses with installed capacity of 1.37MW.
Climate action

continued

Tracking our pathway to net zero

UNSW has committed to reduce total emissions in accordance with a 1.5°C science-based target, which translates to:

> 30 per cent reduction by 2025.
> 50 per cent reduction by 2030.
> Net zero emissions by 2050.

UNSW’s carbon reduction target was developed using the Science Based Targets initiative (SBTi) methodology and approved by UNSW Council in 2020. It includes total emissions across UNSW’s operations (referred to as ‘scope 1 and 2’ emissions, mainly from energy use) and value chain (indirect or ‘scope 3’ emissions from purchased goods and services, construction, investments, travel and other sources).

The table to the right shows a detailed breakdown of UNSW’s GHG footprint since the 2018 baseline year. In 2022, UNSW’s total emissions increased by 18,007 tonnes (13 per cent) to 156,852 tonnes compared to 2021. The largest increases were from business travel (by 10,799 tonnes) following the reopening of international borders, and purchased goods and services (by 7,372 tonnes) due to an increase in supply chain expenditure. These increases resulted from university operations and expenditure levels returning closer to normal levels following substantial reductions during 2020 and 2021.

Emissions also increased from tenant energy use (by 2,581 tonnes), and gas and other fuels (by 1,048 tonnes), due to increased campus activity compared to 2020 and 2021. The largest reduction in emissions (by 3,810 tonnes) was from investments, following the implementation of low emissions and fossil-free investment strategies (see case study) and updates to the implementation of low emissions and fossil-free investment strategies (see case study) and updates to the calculation methodology.

Overall, while total UNSW GHG emissions increased in 2022, they were 46 per cent lower than the 2018 baseline, well ahead of our 2025 target of a 30 per cent reduction and on track to meet our 2050 target of a 50 per cent reduction. UNSW’s performance is therefore ahead of the 1.5°C emission reduction pathway.

</tbody>
</table>

1 Calculated using the NRG grid average electricity emission factor (excluding renewable electricity purchases).
2 67,864 LGCs were surrendered, equivalent to 0.3165 MWh of electricity and 0.6142 tCO₂e of emissions when calculated using the NRG grid average electricity emission factor. Offsetting with LGCs is permissible under the market-based method for accounting for emissions from purchased electricity.
3 Measures performance against UNSW’s total emissions target under the market-based method (includes scope 2 emission reduction from the surrender of LGCs, but not the surrender of carbon offsets).

Unsustainable at UNSW

Climate change

Note: The 2018-21 figures previously reported for scope 3 emission categories 1, 2, 6 and 15 have been restated following a methodology update to improve the accuracy of spend-based emission calculations.
Creating healthy, resilient places for learning and research where people and nature thrive.
Goal: Create healthy, resilient places for learning and research where people and nature thrive.

Why this matters
Our campuses are part of the daily lives of our students and staff, and we aim to make them vibrant places where people can connect with each other and with nature. This connection not only benefits the people at our campuses and field stations, but also the wildlife and ecosystems that call them home. Many of our students and staff are already highly engaged in environmental sustainability issues and their time at UNSW can help prepare them to contribute to a better world.

How we are responding
Living campuses includes how we design and construct buildings and infrastructure, manage green spaces, how our students and staff travel to our campuses, and how we engage students and staff in environmental sustainability issues.

The SDG Modules and SDG Toolkit resources support our educators to integrate sustainability thinking into their course content. Through the LEAF program we aim to engage laboratory users in sustainable practices to save energy, water and waste.

Beyond our campuses, UNSW has committed to transforming the 39,000 hectare Fowlers Gap Arid Zone Research Station in western New South Wales from a sheep station into a dedicated site for conservation and ecological restoration.

Estate Management is focused on optimising the use of existing buildings and other assets throughout their life cycles. When new buildings and refurbishments are required, our minimum sustainability standards and Capital Projects Sustainability Framework apply.

The planning and management of our campuses is led by Estate Management in collaboration with UNSW faculties and divisions, consultants, contractors, government bodies and the wider community.

And are especially focused on these targets:
- 4.7 By 2030, ensure that all learners acquire the knowledge and skills needed to promote sustainable development.
- 11.2 By 2030, provide access to safe, affordable, accessible and sustainable transport systems for all, improving road safety, notably by expanding public transport, with special attention to the needs of those in vulnerable situations, women, children, persons with disabilities and older persons.
- 12.2 By 2030, achieve the sustainable management and efficient use of natural resources.
- 12.8 By 2030, ensure that people everywhere have the relevant information and awareness for sustainable development and lifestyles in harmony with nature.
- 15.1 By 2020, ensure the conservation, restoration and sustainable use of terrestrial and inland freshwater ecosystems and their services – in particular forests, wetlands, mountains and drylands – in line with obligations under international agreements.

Our activities in this area contribute to the following SDGs: 4, 11, 12 and 15.
Living campuses

2022 progress

Several initiatives were implemented or progressed in 2022 in support of living campuses targets.

The LEAF program was expanded following a successful pilot in 2021 (see case study).

The new Village Green precinct opened, with a range of sustainable construction methods used to create facilities for students and staff to enjoy (see case study).

A new Environmental Sustainability website was created to support the Environmental Sustainability Plan 2022-24. The website includes practical resources and templates to help students and staff learn about and implement sustainability principles in their day-to-day activities both on and off campus.

Progress was made to further understand and enhance biodiversity. The development of a new metric to track biodiversity value at the UNSW Kensington campus is underway, with the metric and baseline being finalised in 2023 and further details shared in future reports.

UNSW committed to conserving and restoring the Fowlers Gap Arid Zone Research Station (see case study), and confirmed its commitment to measuring and reversing its impact on nature by taking the Nature Positive Pledge (see case study).

The survey reported a slight reduction in the percentage of students and staff travelling by sustainable travel modes, and an increase in staff travelling by private car. The shift from public transport towards private car use is likely to have been influenced by the COVID-19 pandemic, when public transport was discouraged at times.

Laboratory sustainability program expanded

Following a successful pilot of the Laboratory Efficiency Assessment Framework (LEAF) with UNSW Science in 2021, LEAF was made available to teams University-wide in 2022 to reduce the environmental impact of laboratory activities.

LEAF is an internationally recognised standard for sustainable laboratory operations developed by University College London. It requires laboratory groups to complete actions to save energy, water and waste, reduce their carbon emissions and improve research quality, supported by an online self-assessment tool. Depending on the actions implemented, lab groups can achieve a UNSW Gold, Silver or Bronze LEAF award following an internal audit process.

Twenty-two laboratory groups participated in 2022 including Engineering, Science and Medicine & Health, as well as the Children’s Cancer Institute and the RNA Institute. These groups are reducing the environmental footprint of their research through improved administration, efficient equipment and material use, and appropriate waste management.

Overall, LEAF teams achieved estimated reductions of 2,922 tonnes of CO2, 454,000 litres of water, and $154,000 in laboratory expenses, as well as a significant decrease in single-use plastics usage.

Four labs received a LEAF Silver award and 14 labs received a Bronze award. The recipients are:

- Kirk Lab – School of Chemical Engineering
- Ferrari Laboratory – School of Biotechnology and Biomolecular Sciences
- Lessio Laboratory – School of Chemistry
- Ferrari Laboratory – School of Biotechnology and Biomolecular Sciences
- Beves/Peeks Laboratory – School of Chemistry
- Synbiote – School of Biotechnology and Biomolecular Sciences
- Field/Ball Laboratory – School of Chemistry
- Hunter Laboratory – School of Chemistry
- Synthetic Teaching Laboratory 262 – School of Chemistry
- RNA Institute – School of Chemistry
- Smart Materials and Surfaces Laboratory – School of Chemistry
- Decision Neuroscience Laboratory – School of Psychology
- Nanoporous Materials Laboratory – School of Materials Science and Engineering

Silver awards

- Burns Laboratory – School of Biotechnology and Biomolecular Sciences
- Leissi Laboratory – School of Chemistry
- Micrometrics Laboratory Group – School of Mechanical and Manufacturing Engineering

Bronze awards

- Wich Lab – School of Chemical Engineering
- Children’s Cancer Institute – School of Clinical Medicine
- Comstars Laboratory – School of Biological, Earth and Environmental Sciences
- G005 Teaching Prep Area – School of Biological, Earth and Environmental Sciences
- Lan Laboratory – School of Biotechnology and Biomolecular Sciences
- Biocatalysis – School of Biotechnology and Biomolecular Sciences
- Beves/Peeks Laboratory – School of Chemistry
- Synbiote – School of Biotechnology and Biomolecular Sciences
- Field/Ball Laboratory – School of Chemistry
- Hunter Laboratory – School of Chemistry
- Synthetic Teaching Laboratory 262 – School of Chemistry
- RNA Institute – School of Chemistry
- Smart Materials and Surfaces Laboratory – School of Chemistry
- Decision Neuroscience Laboratory – School of Psychology
- Nanoporous Materials Laboratory – School of Materials Science and Engineering
Fowlers Gap enters new era of conservation

After more than 150 years of pastoral land use, UNSW Sydney has begun restoring Fowlers Gap Arid Zone Research Station in the far west outback of New South Wales into a dedicated site for conservation and research.

The 39,000 hectares property located 1,250 kilometres from Sydney – deep in NSW’s arid zone – has operated as a sheep station and research hub for half a century. UNSW holds a perpetual lease to the far west outback of New South Wales into a dedicated site for the arts.

Professor Richard Kingsford, Director of the Centre for Ecosystem Science at UNSW, said there are great opportunities to understand the functions of arid ecosystems.

"As rich and diverse as the knowledge this station has sprung in the past 10 years. UNSW students – from science, art and more – have journeyed there in the past 10 years.

Village Green project kicks sustainability goals

The Village Green at UNSW Kensington campus opened to the UNSW community in October 2022 following a two-year redevelopment, transforming an under utilised outdoor space into an vibrant and connected place where students, staff and the community can come together to play, exercise, socialise and relax.

The Village Green is landscaped with all-native plantings which will restore tree canopy cover levels to pre-project levels, while the urban farm provides an urban agriculture space including BBQs, wash basins, raised planters, maintenance shed, fire pit and seating for use as an outdoor classroom.

UNSW takes the Nature Positive Pledge

UNSW Sydney has committed to start a nature positive journey by reducing the impacts of our operations and supply chain, why taking the Nature Positive Pledge.

The Nature Positive Pledge is an initiative between the United Nations Environment Programme and the University of Oxford. It is affiliated with the UN Decade on Ecosystem Restoration and was made in 2022 ahead of COP15 to the UN Convention on Biological Diversity in Montreal.

By making this pledge, UNSW became a founding member of Nature Positive Universities and committed to:

- Carry out a baseline study of our impacts on nature.
- Set specific, measurable, time-limited targets for biodiversity.
- Carry out actions for nature to meet our targets, using the conservation hierarchy.
- Report on progress towards these steps on an annual basis. These commitments align with targets and initiatives in the UNSW Environmental Sustainability Plan 2022-24, and progress will be reported in the annual Environmental Sustainability Report from 2023.
Resource efficiency

Conserving resources by reducing consumption, prioritising reuse and responsibly managing waste.
Resource efficiency

Why this matters

University campuses and activities are significant consumers of energy, water and other natural resources, and generators of waste. Our Resource efficiency theme includes programs to optimise the energy and water efficiency of buildings, promote reuse over single-use and improve our recycling systems. By minimising waste and improving waste systems and behaviours, we aim to conserve natural resources, minimise contamination, reduce costs and support sustainable waste management practices amongst our students and staff.

How we are responding

Energy and water efficiency initiatives and waste management systems are managed by Estate Management in collaboration with contractors and the wider student and staff community. We aim to promote reuse and eliminate single-use plastics from campus through initiatives such as Plastic Free Dining and associated communication activities.

The Waste Management Plan guides improvements to our recycling systems, reuse initiatives such as the furniture reuse program, and efforts to optimise waste segregation.

Our activities in this area contribute to the following SDGs: 6, 7 and 12

We are especially focused on these targets:

- 6.4 By 2030, substantially increase water-use efficiency across all sectors and ensure sustainable withdrawals and supply of freshwater to address water scarcity and substantially reduce the number of people suffering from water scarcity.
- 7.3 By 2030, double the global rate of improvement in energy efficiency.
- 12.2 By 2030, achieve the sustainable management and efficient use of natural resources.
- 12.3 By 2030, halve per capita global food waste at the retail and consumer levels and reduce food losses along production and supply chains, including post-harvest losses.
- 12.5 By 2030, substantially reduce waste generation through prevention, reduction, recycling and reuse.
- 12.7 Promote public procurement practices that are sustainable, in accordance with national policies and priorities.

Goal: Conserve resources by reducing consumption, prioritising reuse and responsibly managing waste.

Sustainable Development Goal(s)

Our activities in this area contribute to the following SDGs: 6, 7 and 12

- Introduce the Plastic Free Dining Awards to recognise campus retailers.
- Expand food waste collection to office kitchens and introduced a soft plastics collection system.
- Furniture reuse program diverted 84% of surplus UNSW furniture from landfill to beneficial reuse.

Highlights

- Introduced the Plastic Free Dining Awards to recognise campus retailers.
- Expanded food waste collection to office kitchens and introduced a soft plastics collection system.
- Furniture reuse program diverted 84% of surplus UNSW furniture from landfill to beneficial reuse.

- 12.7 Promote public procurement practices that are sustainable, in accordance with national policies and priorities.
Resource efficiency continued

2022 progress

Several new initiatives were implemented in support of energy, water and waste targets during 2022.

The performance of UNSW Kensington E26 (Biological Sciences North) and E26 (Biological Sciences South) buildings was optimised to improve efficiency and user comfort (see case study).

Several water saving measures were implemented across our campuses, including additional irrigation water meters, cooling tower metering and benchmarking, rectification works in student accommodation, and toilet flushing controls.

A new awards program was launched in early 2022 to celebrate UNSW retailers who have gone plastic-free (see case study). Food and compostable packaging bins were introduced into staff kitchen areas to increase the capture of organic waste for composting, following their introduction in external areas during 2021.

Estate Management also established a soft plastic recycling system at the Kensington campus. Soft plastics that pass the scrunch test – they can easily be squeezed into a ball in your hand – can be recycled when placed in the orange bins at 12 collection points (as of early 2023, only clear soft plastics are accepted for recycling). Three of these locations are open to UNSW community members without swipe card access:

- Biological Sciences Building (E26) – Loading dock.
- The Kensington College (C17) – Parking behind Arc office.
- Chemical Sciences (F10) – Loading dock.

The return of students and staff to campus saw increases in energy and water intensity and waste generated in 2022. Additional efficiency and electrification works will be required to achieve the energy intensity target.

UNSW retailers recognised for going plastic-free

In early 2022, Estate Management introduced the Plastic Free Dining Awards to recognise and celebrate UNSW retailers for going plastic-free. Retailers can achieve a Gold, Silver or Bronze award to highlight their progress in switching to compostable packaging and supporting reuse. The awards also help students and staff to identify where they can eat plastic-free.

By the end of 2022, six retailers had achieved a Gold Award, 14 a Silver Award and three a Bronze Award. Further information about Plastic Free Dining, the scoring criteria and the award status of each retailer can be found on the UNSW Environmental Sustainability website.

Reusing Office Furniture

As learning and teaching requirements change each year, so do the University’s space requirements. In 2019, UNSW established a furniture reuse program in collaboration with contractor Egans Asset Management, to encourage reuse and divert unwanted furniture from landfill. Used furniture is assessed and rated based on its condition: ‘gold’ rated furniture is stored for reuse, ‘silver’ rated furniture is made available for students and staff to purchase at a nominal price, while ‘bronze’ rated furniture is recycled where possible or disposed of to landfill.

In early 2022, 1,146 surplus furniture items were removed at the request of faculties and divisions, with 124 items stored in the reuse store and 222 items reused at other locations on site. 257 items were relocated back to UNSW campuses from the reuse store, while an additional 325 items of refurbished office furniture were supplied to UNSW from Egans’ own stock, leading to substantial resource savings when compared to buying brand new furniture.

A sale of surplus used furniture was held in July to make low cost used furniture available to UNSW students and staff. 201 furniture items were sold to the UNSW community, giving them a new life and preventing 3 tonnes of waste to landfill.

Overall, the program resulted in 84% of surplus UNSW furniture assets, comprising a total weight 49 tonnes, being diverted from landfill.

Optimising building performance for user comfort and energy efficiency

In 2022, the Estate Management Engineering Technology team completed optimisation works on Biological Sciences South (E26) building in support of UNSW energy targets. This initiative aims to ensure that buildings operate efficiently while providing comfortable teaching and learning environments.

The works included a detailed energy audit to identify potential for energy savings, including benchmarking of building control systems and heating, ventilation and cooling system performance. The energy audit also focused on the performance of the building’s air flow equipment. Chilled and hot water systems were also reviewed.

Notable improvements in thermal comfort were reported following the tuning, and overall building energy consumption decreased.
Research focus: UNSW recycling and clean energy initiative secures Trailblazer funding

A recycling and clean energy initiative led by UNSW Sydney in partnership with the University of Newcastle was awarded $50 million in government funding through the approximately $250 million Trailblazer Universities Program.

The two universities will join forces to lead research commercialisation initiatives that help Australia and the world transition to sustainable recycling and clean energy solutions and systems.

The $50 million Federal Government funding has been matched by $50 million cash and $47 million in-kind from UNSW and the University of Newcastle for the initiative. Over 20 industry partners have expressed support for the initiative and committed more than $130 million in cash and in-kind contributions.

UNSW Vice-Chancellor and President, Professor Attila Brungs, said that UNSW was proud and honoured to be leading Australia’s efforts in research commercialisation to support the nation’s manufacturing priorities.

“...that recognises the discovery, development and adoption of technology that has significantly improved societal or industry capabilities,” Prof. Sahajwalla said.

Research focus: UNSW waste pioneer recognised with prestigious award

Leading UNSW researcher Scientia Professor Veena Sahajwalla received the Clunies Ross Innovation Award, one of Australia’s most prestigious research awards, for her globally recognised waste transformation technologies.

Prof. Sahajwalla is an internationally renowned materials scientist, engineer, and innovator who has revolutionised recycling science via the development of next-generation ‘green materials’ derived from waste.

Her latest breakthrough is the development of various microfactory technologies for transforming problematic waste materials, such as glass, textiles and plastics into value-added products such as high-grade filaments for 3D printing and green ceramics for the built environment.

As the Founder and Director of UNSW’s Centre for Sustainable Materials Research and Technology (SMaRT@UNSW), Prof. Sahajwalla leads visionary research programs that foster innovation and promote collaboration with industry, research partners, non-government organisations and governments, on the development of innovative environmental solutions for the world’s biggest waste challenges.

“It’s an incredible honour to be awarded the 2022 Clunies Ross Innovation Award that recognises the discovery, development and adoption of technology that has significantly improved societal or industry capabilities,” Prof. Sahajwalla said.

“In partnership with industry, the universities have secured investment and commitments for the development and commercialisation of solutions in the following priority areas:

- Electrification, Energy Systems and Storage
- Sustainable Fuels and Chemicals Manufacturing (with a special focus on Power-to-X “P2X” based production methods for hydrogen and sustainable aviation fuels)
- Next Generation Solar PV and Systems
- Recycling and microfactories
